

CLEAN International protects and provides clean water worldwide. Through partnerships with international and local corporations and organizations, CLEAN International identifies and designs sustainable projects that make a lasting difference for the future of water and for communities in need. All projects are beneficial for the local community, sustainable, impactful, measurable, monitored and evaluated over time.

CUSTOMIZATION

CLEAN International specializes in customizing projects to meet climate and water goals worldwide. Through analysis of specific regions, watersheds and communities, CLEAN International works alongside local and international specialists to design and scale large-scale projects that will have a positive impact for water today and in the future. From the implementation of smart technology like leak-detection and smart irrigation to large scale lake and well restorations, CLEAN International focuses on conserving large amounts of water in measurable ways.

FULL SPECTRUM SDG BENEFITS

Alongside water replenishment goals, CLEAN International works with partners to identify co-benefits of all projects and implement additional WASH infrastructure and education where possible. From the implementation of rainwater harvesting systems at schools with built-in hygiene stations to the replacement of old faucets and leaking pipes across cities, from the restoration of peatland to the implementation of reuse infrastructure, there are so many innovative, positive ways to make a large and meaningful difference for water and communities in need. Projects often have multiple co-benefits and CLEAN International outlines and measures these impacts in reference to each of the United Nations Sustainable Development Goals.

EVALUATION & REPORTING

Monitoring, reporting and measurement of impact are central to all of CLEAN International's projects and where possible, smart technology is used to aid in collecting real-time data from the field. CLEAN International evaluates and reports on all projects yearly and calculates impact in conjunction with goals and co-benefits of the project. Beyond the numbers, CLEAN International provides insight into the impact of the project through photos, video and stories from the field.

As climate continues to change, water is often at the forefront, whether too little or too much, water has a key role to play in all aspects of life. CLEAN International looks forward to expanding the reach and positive impact of sustainable innovations and initiatives worldwide.
